Abstract of corresponding document: **US2005173370**

The invention relates to a closure device ( 1 ) for a container. The inventive device comprises a cover ( 2 ) which is equipped with an inner skirt ( 24 ) that can rest against the internal radial surface ( G 2 ) of the neck ( G ) of a bottle ( B ). The base ( 23 ) of the cover ( 2 ) is provided with a first layer ( 5 ) of material which is impervious to one or more pre-determined gases and a second layer ( 6 ) which covers the first layer and which is made from a material that can absorb one or more pre-determined gases, preferably an oxygen-absorbing material.
